

## ***Safety Pads***

### **For Schools and Nurseries**

### **Safety in Schools**

**Schools and nurseries must now consider the need to cover up exposed posts, pillars and columns or risk children running into them and being seriously injured. These days there is a real risk of prosecution arising from accidents of this type and the relatively small cost involved is well worth it.**

#### **Safety pads are:**

- made of high-impact absorbent foam
- hardwearing with reinforced PVC rip-stop covers
- can be made to any size or shape are easily attached and removed.
- Brightly coloured PVC covered foam post protectors can be fitted to all our standard shade structures.
